DESCRIPTORS College Admission; *College Applicants; *College Freshmen; *College Transfer Students; Community Colleges; *Enrollment; Females; Liberal Arts; Majors (Students); Males; Tables (Data); Two Year Colleges; *Two Year College Students; Vocational Education

ABSTRACT

This three-part report provides data on the number, sex, and program interest of the applicants to Kapiolani Community College (KCC), and similar data for the applicants who were accepted and the students who actually registered at the college for each Fall semester, 1975 through 1980. The first section provides introductory material on the purposes and sources of data for the report. The second section presents tables and text detailing: (1) the number of applicants; (2) the rate of acceptances to applications; (3) the rate of registrations to acceptances; (4) the "going rates" of Hawaii high school graduates entering KCC; and (5) the proportions of KCC transfers from the University of Hawaii's various campuses, the Hawaii community colleges, other Hawaii institutions, and out-of-state institutions. The final section compares Fall 1980 and Fall 1975 entering groups in these areas. Appendix A details applications, acceptances, and registration data for each college program for the years 1975 through 1980, and Appendix B indicates the number of graduates from each Oahu public high school and the number of these graduates who enrolled at KCC for the same years. (AYC)

A. Introduction

Since 1975, selected enrollment data on entering (new and transfer only) students have been available to each community college in the University of Hawaii system. Earlier this year, a report (IRACC-4) was distributed which compiled and summarized these data for the system, by campus.[1]

Of concern to some personnel at Kapiolani are enrollment trends in several programs. This report was designed to give these individuals a comprehensive report including data for Fall 1980 and data related to campus monitored admission activities, as well as information by program and sex. As planning progressed, however, we decided to postpone reporting data related to campus monitored activities and to add, instead, a summary of the Hawaii high school backgrounds of students entering the University system and Kapiolani, as well as the college backgrounds of transfers to Kapiolani.

B. Summary of Findings

This section presents data on the number of Kapiolani Community College's applications, acceptances and registrations for the total group as well as by entry status (new and transfer) for each fall semester, 1975 through 1980.

In addition to the data on program and sex (Table 1) are presented the following data: Hawaii high school backgrounds (public and private) of recent graduates immediately entering the University of Hawaii system and KCC in particular (Table 2) and the college backgrounds of transfer students (Table 3). Changes in acceptance procedures were made in Fall 1978 which account for the definite break in pattern over the six-year period. For the last three years, compared to the earlier three years, there are significantly higher ratios of acceptances to applications and lower ratios of registrations to acceptances. Thus, to facilitate the discussion, longitudinal comparisons will be restricted to data for the last three years, Fall 1978 to Fall 1980.

Table 1 will be used as a reference for our discussion of the total entering group, new students and transfer students. Similar data by program majors are found in Appendix A.

Sources: Computer Reports in the 2542B series, as summarized in IRACC-4, SFLOW Reports 2, 18, 31.

1. Total Entering Group

In Fall 1980, KCC processed 3,609 applications, accepted 3,443 students (95% of the applications), and enrolled 2,316 entering students (67% of the acceptances).

Rates for liberal arts majors were slightly higher than those for vocational education programs. For example, liberal arts accepted 97 percent of applications; vocational education, 95 percent. More of the accepted students in liberal arts, than in vocational education, enrolled (70% and 67%, respectively. Unclassified students, approximately one-tenth of the entering group, are characterized by their 100 percent registration-to-acceptance rate. This has been true since Fall 1977.

The application-acceptance-registration relationships were the same for males and females in Fall 1980, although females outnumber males at Kapiolani almost two to one.

While the numbers of applications and acceptances in Fall 1980 were lower than those of Fall 1978, the number of registrations was considerably higher than for the two years immediately preceding. As in Fall 1978, the number of liberal arts majors in Fall 1980 exceeded the number of majors in vocational programs. Additional analysis reveals that liberal arts and vocational majors constitute approximately 45 percent each of the total entering group. However, in Fall 1978, liberal arts majors represented 51 percent of the enrollment. During this period, there was no change in the ratio of females to males.

2. New Students

Students new to higher education submitted 2,519 applications to KCC for Fall 1980. KCC accepted 2,423 (96% of applications) and enrolled 1,655 (68% of acceptances) new students.

Rates for liberal arts majors were slightly higher than those for majors in vocational programs. For example, of liberal arts applicants, 98 percent were accepted and of these, 72 percent registered; in vocational education, these rates were 96 percent and 67 percent, respectively. Not as high a proportion of unclassified applicants was accepted (85%) but all accepted students enrolled.

The application-acceptance-registration relationships were just about the same for males and females: acceptances to applications, 96 percent and 97 percent, respectively, registration to acceptances, 69 percent and 67 percent, respectively.

Except for the number of registrations in Fall 1980, considerably higher than for the two years immediately preceding, patterns in the application-acceptance-registration relationship show no significant changes, by program and by sex. Separate analysis, however, reveals that of the total entering group, the proportion of new liberal arts majors generally decreased (53% in Fall 1978 to 47% in Fall 1980) while, for the same three-year period, proportions of vocational majors increased (40% in Fall 1978 to 45% in Fall 1980).

Data related to the high school backgrounds (public and private) of new students are summarized in Table 2, for Hawaii State only and expressed in terms of Kapiolani's "going rate." This rate is the percentage of Hawaii State high school graduates entering KCC immediately after graduation. Going rates for public, Oahu high school districts are also given. Additional details on the number of graduates from each public, Oahu high school enrolled at KCC in Fall 1980 are given in Appendix B.

The data show that there were 14,068 graduates of Hawaii State high schools, of whom 928 enrolled at KCC (6.6% going rate) in Fall 1980, immediately after graduation. KCC registrants from public high schools numbered 820 (7.1%); private schools, 108 (4.2%). For graduates of public, Oahu school districts, the going rates in Fall 1980 were: Honolulu, 17.9 percent; Leeward, 3.3 percent; and Windward, 6.4 percent.

An examination of the data shows that the going rates for the Honolulu and the Leeward districts, Fall 1980 compared to Fall 1979, increased (17.9% versus 15.6% and 3.3% versus 2.6%, respectively), while the other rates remained relatively stable. It is interesting to note that the public school graduates of Honolulu and Leeward districts had the highest going rates in Fall 1980 compared to those of previous five semesters.

An examination of the data for Fall 1975 <u>through</u> Fall 1980 shows that KCC's:

- highest going rate (7.6%) among <u>all</u> high school graduates occurred in Fall 1976; the lowest (6.4%) in Fall 1979.
- highest going rate (8.0%) among <u>public</u> high school graduates occurred in Fall 1976; the lowest (6.7%) in Fall 1979.
- highest going rate (6.3%) among <u>private</u> high school graduates occurred in Fall 1975; the lowest (4.2%) in Fall 1980.

Sources: State of Hawaii, Department of Education, Information System Branch, "Details of Hawaii High School Backgrounds," Report Series 14288 and 25108 as compiled in MSO-145, MSO-152, MSO-159, ASO-007 UHS, I (02-12-80) for Fall 1975 to Fall 1979.

3. Transfer Students

Students with previous college credits but new to Kapiolani submitted 1,090 applications for Fall 1980. KCC accepted 1,020 (94% of applications) and enrolled 661 (65% of acceptances) transfer students. These rates were slightly lower than those for new students (96% and 68%, respectively).

A comparison of liberal arts and vocational program majors revealed: the acceptance-to-application rate was higher in liberal arts (95% versus 91%), but the registration-to-acceptance rate was higher for vocational education (68% versus 65%). For unclassified students, the acceptance-to-application rate was 95 percent, considerably higher than that for new students (85%), and the registration-to-acceptance rate was 100 percent (similar to that of new students).

While the acceptance-to-application rates were similar for males and females (95% and 93%, respectively), a higher proportion of accepted females registered (67%) than males (63%).

Noteworthy among the data for transfers is the considerable increase in Fall 1980, compared to Fall 1979, in registration-to-acceptance rates of vocational majors (68% versus 53%) and females (67% versus 50%).

Data related to the college backgrounds of student transferring to KCC, with details for campuses in the UH system are summarized in Table 3. Additional details, including what programs these transfers entered, are available in the sources listed for Table 3.

The Fall 1980 data show that 661 students transferred to KCC from the following institutions: campuses within the UH system, 481 (72.8%); other Hawaii institutions, 31 (4.7%); out-of-state institutions, 147 (22.2%). A large number of transfers were from the following campuses within the UH system: UH-Manoa and CCECS, 232; Honolulu CC, 118; Leeward CC, 70.

An examination of the data for the last three years shows that there is a higher proportion of transfers from out-of-state institutions (22.2% in Fall 1980 compared to 18.4% in Fall 1978).

[a]Beginning with Fall 1980 data, UH-Manoa and CCECS are treated as one institution. Therefore, transfers from CCECS are no longer given separately.

[b]Beginning with Fall 1979 data, UH-Hilo and Hawaii CC are treated as one institution. Therefore, transfers from Hawaii CC are no longer given separately.

Sources: "Last College Attended by Transfer Students," Report Series 1402A and 2520 as compiled in MSO 146, MSO 153, MSO 160, ASO 011 UHS, I (01-31-80) for Fall 1975 to Fall 1979.

C. Concluding Comments

In the previous section, analysis and discussion of the longitudinal data was limited to the last three years of the Fall 1975 - Fall 1980 period, primarily because there was a change in campus admission procedures in Fall 1978. However, our AIDP evaluation plan calls for a comparison of the Fall 1980 entering group with that of Fall 1975. What follows is a brief comparison of the Fall 1980 entering group compared to Fall 1975:

Number of Applications

- more new-student applicants (14% increase), and a small (2%) increase in transfer applicants
- many more applicants to liberal arts among both new (44% increase) and transfer (221% increase) students; a decrease in applications to vocational programs (20%)
- an increase in both male and female applicants (26% and 8%, respectively) among new students and in male applicants only (11%) among transfers

Rate of Acceptances to Applications

- much higher for both new (96% and 86%) and transfer students (94% and 76%)
- higher for liberal arts (98% and 94%) and vocational education majors (96% and 80%) among new students as well as transfer students
- higher for males (96% and 92%) and females (97% and 83%) among new students as well as transfer students

Rate of Registrations to Acceptances

- lower, especially among new students (68% and 77%)
- lower for liberal arts (72% and 80%) and vocational education (67% and 77%) programs among new students and for vocational education only among transfers
- lower for both males (69% and 76%) and females (67% and 78%) among new students and for males only among transfers

Because these rates were distinctly lower beginning in Fall 1978 when the policy change in admission procedures was made, than in prior years, additional analysis revealed the following: for the total entering group, rates of registrations to applications were 61 percent in Fall 1975 and 66 percent in Fall 1980, but ranged from 50 percent to 57 percent for the years in between. Furthermore, the actual number of registrations was considerably higher in Fall 1980 (2,316) than in Fall 1975 (1,997).

Going Rates of Hawaii State High School Graduates Entering KCC

- lower for private (4% and 6%) high school graduates
- higher for Leeward district (3% and 2%); relatively the same for Honolulu and Windward districts

Proportions of KCC Transfers, by College Backgrounds

- higher from within the UH system (73% and 68%) and from out-of-state institutions (22% and 21%); much lower from other Hawaii institutions (5% and 11%)
- higher from Honolulu CC (18% and 11%) and UH-Manoa (35% and 34%); lower from Leeward CC (11% and 13%)

These data, along with the appendices, as well as KSFP Report No. 8 (Selected Characteristics of Fall 1980, Entering Students), present a complete picture of Kapiolani's Fall 1980 entering group. As campus personnel study and analyze the data further, perhaps questions such as the following should be explored:

- What restrictions do current facilities and funds place on the number of entering students that Kapiolani can enroll? How do these restrictions affect the setting of target enrollments for each program?
- If the number of entering students (Fall 1980 being the exception) remains about 2,000, more applications may need to be redirected to other campuses. How soon/late should this be done? To what extent should application deadlines be extended/shortened? To what extent, and when, should departments be involved in the admission process?
- Should selected high schools be targeted for activities which would help to increase the going-to-KCC rates? How much more, than is currently being done, can be expected of student services personnel working with Hawaii State high schools?

We hope that campus personnel will find all of these findings helpful. Anyone who is interested in further analyzing the data is encouraged to contact the staff working on Kapiolani's Student Flow Program.
